

Brock Hopper Valve for Easy Access to Stored Materials

Brock's unique Hopper Slide Valve Kit gives an alternate way to easily get small amounts of feed or other stored materials out of a hopper-bottom bin or silo. This easy access is important when a small quantity of the stored material is needed at a location not serviced by the auger system.

Add a lock to prevent accidental discharge.

The optional Hopper Valve Kit's simple, hand-operated slide gate permits easy discharge of small amounts into a bucket or wheel-barrow. You can draw material out for samples. Or you can get feed for a small group of animals in another location.

- Simple to install
- Easy to operate
- Fits any new or existing BROCK® Bin or Silo
